This Study is Intentionally Left Blank

A systematic literature review of blank pages in academic publishing*

Glen (Always) Wright,[✉] (Special) FX Coudert,[✉]
(Aston) Martin Bentley,[✉] Graham (Stainless) Steel,[✉]
Sylvain (Red) Deville[✉]

Abstract

Common in all areas of publishing, the phrase “*This Page is Intentionally Left Blank*” has been found in peer-reviewed academic articles costing \$30 to access. To the best of our knowledge, this paper represents the first known review of Intentionally Blank Pages (IBPs). We looked at the variations in samples from the existing literature, and quantified the amount of blankness on such pages using a new metric, the “Blankness Defect Rate” (BDR). After showing that most blank pages are

Beards

FIG. 3.—Skirt width (1823–1934) and beard frequency fluctuations (1844–1955), five-year moving averages. The time scales of the two curves have been positioned to allow for assumed 21-year lead in skirt fluctuations possibly related to comparative youthfulness of subjects in Richardson and Kroeber's population samples for dress (see text for further explanation). Coefficient of correlations for the two series, $r = .867$. Sources: skirt widths (Richardson and Kroeber 1940, table 8); beard frequencies, Appendix.

After many years of absence from the laboratory scene, beards are now being worn by some persons working with pathogenic microorganisms.

An ornate, symmetrical decorative frame in a light gray color, set against a dark blue background. The frame features intricate scrollwork and floral motifs at the top, bottom, and corners. A horizontal line with a small decorative flourish in the center is positioned above the text.

Two-, Three-, and Four-Atom Exchange Effects in bcc ^3He

J. H. Hetherington and F. D. C. Willard

Physics Department, Michigan State University, East Lansing, Michigan 48824

(Received 22 September 1975)

We have made mean-field calculations with a Hamiltonian obtained from two-, three-, and four-atom exchange in bcc solid ^3He . We are able to fit the high-temperature experiments as well as the phase diagram of Kummer *et al.* at low temperatures. We find two kinds of antiferromagnetic phases as suggested by Kummer's experiments.

We have been able both to fit the high-temperature solid- ^3He magnetic data¹⁻⁶ and, through mean-field theory, to obtain a phase diagram like that of Kummer *et al.*^{7,8} We consider only three mechanisms of exchange,⁹⁻¹¹ two-atom, three-atom rings, and four-atom rings, and adjust their strengths to fit the data.

The Hamiltonian we take is of the form¹²

$$\begin{aligned} \mathcal{H} = & -\frac{1}{4} \sum_i \sum_\nu J_\nu \vec{\sigma}_i \cdot \vec{\sigma}_{i+\nu} - \mu \vec{B} \cdot \sum_i \vec{\sigma}_i \\ & - \frac{1}{4} \sum_{ijkl} \Lambda_{ijkl} (\vec{\sigma}_i \cdot \vec{\sigma}_j) (\vec{\sigma}_k \cdot \vec{\sigma}_l), \end{aligned} \quad (1)$$

where $\mathcal{H}$ is the Hamiltonian with an overall positive sign.

Without the σ^4 terms in $\mathcal{H}$ only these two structures are possible in mean-field theory when only J_1 and J_2 are nonzero. Without proof, we have assumed that consideration of these two phases is adequate even when the σ^4 terms are present.

The computation proceeded by examining at each value of T and B all solutions of the mean-field equations for the scf, naf, and paramagnetic phases and choosing the solution with lowest free energy.

invite willard?
He never gets
invited anywhere."

MICHIGAN STATE UNIVERSITY

COLLEGE OF NATURAL SCIENCE • DEPARTMENT OF PHYSICS

EAST LANSING • MICHIGAN • 48824

November 26, 1975

Professor Jack Hetherington
Director of U Research
Dept. of Physics
Campus

Dear Jack:

In response to your valued letter of 25 November: let me admit at once that if you had not written I should never have had the temerity to think of approaching so distinguished a physicist as F. D. C. Willard, F.R.S.C., with a view to interesting him in joining a university department like ours,

APS Announces New Open Access Initiative

April 1, 2014

APS is proud to announce a new open access initiative designed to further extend the benefits of open access to a broader set of authors. The new policy, effective today, makes all papers authored by cats freely available. This open-minded update is a natural extension of APS's leadership in both open access and pet publishing. As early as 1975, APS began publishing papers with feline authors, most notably the contribution by one [F. D. C. Willard](#) [J. H. Hetherington and F. D. C. Willard, Two-, Three-, and Four-Atom Exchange Effects in $\text{bcc } ^3\text{He}$, [Phys. Rev. Lett. 35, 1442 \(1975\)](#)]. Going forward, only single author papers will be considered. APS hopes to evaluate allowing publication by canine authors in the near future. Not since Schrödinger has there been an opportunity like this for cats in physics.

5 FREE PIECES OF LIFE CHANGING ACADEMIC ADVICE

Academic advice #1:

Write clearly

This is about developing recursive, intrinsic, self-reflexive as de-and/or resubjective always evolving living research designs. It is about learning and memory cognition and experiment poetic/creative pedagogical science establishing a view of students ultimately me as subjects of will (not) gaining from disorder and noise: Antifragile and antifragility and pedagogy as movements in/through place/space. Further, it is about postconceptual hyperbolic word creation thus a view of using language for thinking not primarily for communication. It is brain research with a twist and becoming, ultimately valuation of knowledges processes: Becoming with data again and again and self-writing theory. I use knitting the Möbius strip and other art/math hyperbolic knitted and crocheted objects to illustrate nonbinary . . . perhaps. Generally; this is about asking how-questions more than what-questions

Academic advice #2: Cite your sources

time of divine Providence, which has in

¹ This was once revealed to me in a dream.

² See R. Otto, *Das Heilige*. He has some i

Academic advice #3: Be grateful

Acknowledgments

I BLAME ALL of you. Writing this book has been an exercise in sustained suffering. The casual reader may, perhaps, exempt herself from excessive guilt, but for those of you who have played the larger role in prolonging my agonies with your encouragement and support, well . . . you know who you are, and you owe me.

Academic advice #4:
Find your niche (then cling to it for dear life).

Academic advice #5:
The sum of human knowledge
is contained in just 2 books.
